

Manga Translation Manual

Translating manga can be a rewarding task, especially when you have the right tools at your disposal. This manual will cover the process of translating WIE Japan manga stories, which are originally in English, into any language, using the tools iLovePDF, Sketchbook and Canva. Let's start!

Step 1: Download the PDF of the manga story

1. Access the [WIE](#) website and locate the manga section.
2. Select the story that has been assigned to you.
3. Download the PDF file of the story to your computer.

Step 2: Convert PDF to JPG images

1. Open the [iLovePDF](#) website.
2. Select the "PDF to JPG" tool.
3. Upload the PDF file you downloaded.
4. Choose the "Convert entire pages" option and click "Convert".
5. After conversion, download the ZIP file containing the resulting JPG images.
6. Unzip the ZIP file to the desired folder on your computer to access the images individually.

Step 3: Prepare and edit images in Autodesk Sketchbook

3.1 Download and install Autodesk Sketchbook:

1. Visit the official Autodesk [Sketchbook](#) website.
2. Click the appropriate download button for your operating system (Windows or macOS).
3. After the installation file is downloaded, run it and follow the instructions to install the software on your computer.

3.2 Remove English text using Sketchbook:

1. Open Autodesk Sketchbook.
2. Import the desired JPG image:
 - Click File > Open and select the image you want to edit.
3. Select the appropriate tools to remove text:
 - Use the eraser tool to erase the English text from the speech bubbles. Adjust the eraser size as needed for greater accuracy.
 - In cases where the eraser may remove details from the background, you can use the brush tool to paint over the text with a color that matches the background or interior of the speech bubble.
4. Zoom and adjustments:
 - Use the zoom tool to enlarge the areas where you are working, ensuring that all text removal is done cleanly and precisely.
5. Save the edited image:
 - After removing all the text, save the image. Click File > Save As and choose PNG format to maintain image quality without a transparent background.
 - Make sure to name the file so that you can easily identify it later.

Step 4: Add translated text using Canva

1. Go to the [Canva](https://www.canva.com) website and create a new A4 document design.
 2. Upload the PNG images you edited to Sketchbook.
 3. Drag each image to a separate page in Canva.
 4. Use Canva's text tool to add the translation to each speech bubble or text frame.
 - Font: Two types of font will be used, "Noto Sans" and "Comic Sans". "Noto Sans" will be used on the home page and "Comic Sans" in character dialogue.
 - Font Size: Adjust the font size according to the space available in the speech bubbles, typically size 8 depending on the space.
- Check the example at the end of the document.
5. Make sure the text is well aligned and visually harmonious.

Step 5: Download and send the translation

1. After you finish entering all the texts, review the entire document to check for errors.
2. Download the file in "Printable PDF" format from Canva.
3. Send the translated PDF to those responsible for the project at WIE Japan.

Final recommendations

- Fidelity to the content: Although some linguistic adaptations may be necessary, try to remain faithful to the original content. The essence and tone of the manga must be preserved.
- Review: Always review the translation and layout before finalizing the document. If possible, ask someone else to review it as well.

TRANSLATED MANGA EXAMPLE

ORIKOU! RIKO-CHAN

Font: Noto Sans
Size: 20

Episodio 3

Riko-chan y el circuito perfecto

Autor: Laís Baptista
Guión: Yasunori Kasuga
Desarrollo del personaje: Kei

Font: Noto Sans
Size: 18

Font: Comic Sans

Size: 8
